Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/621,085

Applicant(s)

MORTENSEN ET AL.

Examiner

Giovanna Colan

Art Unit

2162

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 March 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is issued in response to the Amendment filed on 03/05/2007.
2. No claims were amended. No claims were canceled. No claims were added.
3. This action is made Final.
4. Claims 1 –11 are pending in this application.
5. Applicant's arguments filed on 03/05/2007 have been fully considered but they are not persuasive.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claim 1 – 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cianfrocca et al. (Cianfrocca hereinafter) (US Patent No. 6,088,796), in view of Ananian et al (Ananian hereinafter) (US Patent No. 6,922,701 B1), and further in view of Shapiro (US Patent App. Pub. No. 2006/0005126 A1, filed: October 7, 2002).

Regarding Claim 1, Cianfrocca discloses a method of managing data in a plurality of disparate and diverse databases (Fig. 1, items 105, and 106, Col. 6, lines 11 – 20, Cianfrocca) comprising:

providing a first database located in a first location (Fig. 1, item 105, Col. 6, lines 11 – 14, Cianfrocca) and further being located behind a first firewall (Fig. 1, item 104, Col. 6, lines 13 – 14, Cianfrocca);

providing a second database located in a second location (Fig. 1, item 106, Col. 6, lines 14 – 17, Cianfrocca) and further being located behind a second firewall (Fig. 1, item 104, lines 14 – 17, Cianfrocca);

providing a clearinghouse server (Fig. 1 and 4, item 103, Web Server Running Messenger System, Col. 6 and 17, lines 17 – 20 and 1 – 2; respectively, Cianfrocca) located outside of said first firewall and said second firewall (Fig. 1, item 104, Firewall, Col. 6, lines 19 – 22, Cianfrocca), said clearinghouse server having a clearinghouse database (Fig. 4, Col. 17, line 54, Database, Cianfrocca);

providing a workstation located behind said first firewall (Col. 16, lines 24 – 28, Cianfrocca¹); said workstation having a clearinghouse interface program (Col. 16, lines 27 – 28, clients, Cianfrocca²);

establishing communications between said clearinghouse interface program with said clearinghouse server (Col. 16, lines 24 – 26, Cianfrocca).

Cianfrocca does not explicitly teach indexing CAD data from the databases, transmitting request for a requested file, determining the location of said requested file, sending a request to second database for said file, converting said file to transmittable format, or transmitting said file. On the other hand, Ananian discloses a method and system for managing CAD data files (Col. 2, lines 43 – 47, Ananian), including: a clearinghouse database comprising an index to at least a portion of CAD data in first database and at least a portion of CAD data in second database (Fig. 1, Col. 9 and Col. 11, lines 19 – 23 and 4 – 8; respectively, Ananian); transmitting a request for a requested file from said clearinghouse interface program to said clearinghouse server (Col. 13, lines 14 – 30, Ananian); determining that said requested file is located in said second database by using said clearinghouse database (Col. 14, lines 2 – 4, Ananian³); sending a request from said clearinghouse server to said second database for said

¹ Cianfrocca discloses, as cited above, workstations including programs, in the User Agent, to communicate with the messenger system server (equivalent to the clearinghouse server). In addition, Cianfrocca discloses that the communication between the User Agent and messenger system server will be across firewall (Col. 8, lines 7 – 9). This implies that the workstations are also behind the firewall.

² Cianfrocca discloses that clients will be programs that run at user workstations and call routines to connect to the messenger system server (equivalent to the clearinghouse server).

³ Ananian further discloses entering zip code or country (location) and other topics of the specific item requested. This implies locating the requested item in a specific database (see Col. 14, Table 1, lines 23 and 27).

requested file (Col. 14, lines 35 – 38, Ananian); converting said requested file to a first transmittable format (Col. 3 and 7, lines 37 – 39, and 21 – 27 and 48 – 53; respectively, Ananian⁴). It would have been obvious to one of ordinary skills in the art at the time the invention was made to add Ananian's functionality for sending and converting a CAD file to the system and method of Cianfrocca to let users manipulate, modify, and update different CAD format files. One of ordinary skills in the art at the time the invention was made would have been motivated to do so, in order to improve interaction between the client and the professionals throughout the construction process; to ensure consistent and informed client input, cost-effective decisions, while maintaining the client's visionary perspective (Col. 2, lines 10 – 17, Ananian). In addition, the prior art suggests a successful outcome of this combination, such as, significantly reducing the time, complexity and uncertainty involved in the design of a structure (Col. 3, lines 43 – 45, Ananian), improving interaction between the client and the builder throughout the construction process (Col. 3, lines 53 – 55, Ananian), acquiring a fully detailed build specification from a client (Col. 3, lines 58 – 60, Ananian), and reducing lengthy communications between the builder and the client, making the builder efficient and able to focus on the core task: building the house (Col. 3, lines 61 – 64, Ananian).

⁴ Wherein the profile response corresponds to the requested file as claimed (Col. 3, lines 37 – 39, Ananian); the data file of the plan set corresponds to the requested file claimed (Col. 7, lines 9 – 13 and 20 – 24, Ananian); and the "XML" (External Markup Language) corresponds to the transmittal form claimed (Col. 7, lines 21 – 27 and 48 – 53, Ananian).

The combination of Cianfrocca in view of Ananian discloses all the limitations as discussed above including translating⁵ the content. However, the combination of Cianfrocca in view of Ananian does not expressly disclose: without content change of said requested file. On the other hand, Shapiro discloses converting files to formats without content change of said requested file (Fig. 5, and 6, "Source Artwork ENGLISH", and "Target translated Artwork FRENCH", Page 4, 5, and 6, [0051], [0067], and [0072], lines 1 – 20, 9 – 13, and 8 – 11, "... the Extractor adds an attribute whose value corresponds to the sequential identification number and which **does not cause a change to the appearance of the object in the Artwork file...**" (Emphasis added); and further "...when translating from one language to another, the size of print (point size) may need to decrease, or increase, **to preserve the same legibility of original text...**" (Emphasis added); respectively, Shapiro). It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the Shapiro's teachings to the system of the combination of Cianfrocca in view of Ananian. Skilled artisan would have been motivated to do so, as suggested by Shapiro (Page 4, [0051], lines 1 – 9, Shapiro); and to efficiently transform location based objects, to convert geographical maps from one language to another, avoiding major re-editing of the source file, but keeping the appearance and quality of the location based translated text. In addition, both of the references (Cianfrocca, Ananian, and Shapiro) teach features that are directed to analogous art and they are directed to the same field of endeavor, such as, databases management systems, converting CAD data files, and translation.

⁵ According to the Academic Press Dictionary of Science and Technology (1992) from Elsevier Science &

This close relation between the applied references highly suggests an expectation of success.

Furthermore, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses:

and transmitting said requested file from said second database in said first transmittable format (Col. 20, lines 1 – 6, Ananian).

Regarding Claim 2, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a method, wherein said workstation is a CAD workstation (Col. 16, lines 24 – 28, Cianfrocca⁶; Col. 2, lines 43 – 47, Ananian) and said clearinghouse interface program is a plug-in application (Col. 16, lines 27 – 28, clients, Cianfrocca⁷; Col. 16, lines 26 – 29, Ananian).

Regarding Claim 3, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a method, wherein said establishing communications between said clearinghouse interface program and said clearinghouse server comprises authenticating and authorizing said clearinghouse interface program (Col. 13, lines 40 – 45, Ananian).

Technology, "translate" means: "1. To convert from one computer language to another. 2. Generally, to convert information from one form to another without altering meaning or function."

⁶ Cianfrocca discloses, as cited above, workstations including programs, in the User Agent, to communicate with the messenger system server (equivalent to the clearinghouse server). In addition, Cianfrocca discloses that the communication between the User Agent and messenger system server will be across firewall (Col. 8, lines 7 – 9). This implies that the workstations are also behind the firewall.

⁷ Cianfrocca discloses that clients will be programs that run at user workstations and call routines to connect to the messenger system server (equivalent to the clearinghouse server).

Regarding Claim 4, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a method, further comprising:

converting said requested file from said first transmittable format to a first CAD format (Col. 5, lines 21 – 28, Ananian);

translating said requested file from said first CAD format to a second CAD format (Col. 7, lines 8 – 12, Ananian; and Page 4, [0051], lines 14 – 20; Shapiro);

converting said requested file from said first CAD format to said second transmittable format (Col. 7, lines 49 – 54, Ananian);

transmitting said requested file to said first CAD station using said second transmittable format (Col. 7, lines 62 – 65, Ananian⁸); and

converting said requested file from said second transmittable format to said second CAD format (Col. 8, lines 6 – 11, Ananian⁹).

Regarding Claim 5, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a method, wherein said step of translating said requested file from said first CAD format to said second CAD format is performed by said clearinghouse server (Col. 6, lines 9 – 12, Ananian; and Page 4, [0051], lines 14 – 20; Shapiro).

⁸ The profile engine would correspond to the first CAD station.

⁹ The format of the extracted data with highly detailed features of the buildings corresponds to the Computer Aided Design (CAD) format.

Regarding Claim 6, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a method, wherein said first transmittable format comprises XML (Col. 7, lines 20 – 26, Ananian).

Regarding Claim 7, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a system for sharing files across disparate databases (Fig. 1, items 105, and 106, Col. 6, lines 11 – 20, Cianfrocca) comprising:

a first server located behind a first firewall (Fig. 1, item 104, Col. 6, lines 13 – 14, Cianfrocca) and connected to a first database (Fig. 1, item 105, Col. 6, lines 11 – 14, Cianfrocca) that contains a first set of files (Col. 9, lines 40 – 43, Cianfrocca);

a second server located behind a second firewall (Fig. 1, item 104, Col. 6, lines 14 – 17, Cianfrocca) and connected to a second database (Fig. 1, item 106, Col. 6, lines 14 – 17, Cianfrocca) that contains a second set of files (Col. 19, lines 30 – 33, application server components, Cianfrocca);

a clearinghouse server (Fig. 1 and 4, item 103, Web Server Running Messenger System, Col. 6 and 17, lines 17 – 20 and 1 – 2; respectively, Cianfrocca) located outside of said first firewall and said second firewall (Fig. 1, item 104, Firewall, Col. 6, lines 19 – 22, Cianfrocca);

a clearinghouse database located on said clearinghouse server (Fig. 4, Col. 17, line 54, Database, Cianfrocca) and having an index to at least a portion of said first set of files in said first database and at least a portion of said second set of files in said second database (Fig. 1, Col. 11, lines 4 – 8, Ananian);

a workstation located behind said first firewall (Col. 16, lines 24 – 28, Cianfrocca¹⁰) and having a clearinghouse interface program capable of interfacing with said clearinghouse database on said clearinghouse server (Col. 16, lines 24 – 28, messenger system enabled application components are programs that call routines in the User Agent Library, Cianfrocca¹¹), said clearinghouse interface program further capable of sending a request for a specific file indexed in said clearinghouse database (Col. 13, lines 14 – 26, Ananian);

said clearinghouse server further receiving said request for said specific file from said workstation (Col. 13, lines 29 – 30, Ananian), determines that said specific file is located on said second database (Col. 14, lines 2 – 4, Ananian¹²), and sends said request for said specific file to said second server (Col. 14, lines 35 – 38, Ananian); and

said second server further receives said request for said specific file (Col. 7, lines 39 – 41, Ananian), locates said specific file in said second database (Col. 7, lines 65 – 67, Ananian), converts said specific file into a first transmittable format (Col. 8, lines 4 – 10, Ananian) without content change of said specific file (Fig. 5, and 6, “Source Artwork ENGLISH”, and “Target translated Artwork FRENCH”, Page 4, 5, and 6, [0051], [0067], and [0072], lines 1 – 20, 9 – 13, and 8 – 11, “... the Extractor adds an attribute whose value corresponds to the sequential identification number and which **does not cause a**

¹⁰ Cianfrocca discloses, as cited above, workstations including programs, in the User Agent, to communicate with the messenger system server (equivalent to the clearinghouse server). In addition, Cianfrocca discloses that the communication between the User Agent and messenger system server will be across firewall (Col. 8, lines 7 – 9). This implies that the workstations are also behind the firewall.

¹¹ Cianfrocca further discloses that these components run in workstations with an interface (Col. 16, lines 27 – 28).

¹² Ananian further discloses entering zip code or country (location) and other topics of the specific item requested. This implies locating the requested item in a specific database (see Col. 14, Table 1, lines 23 and 27).

Art Unit: 2162

change to the appearance of the object in the Artwork file...” (Emphasis added); and further “...when translating from one language to another, the size of print (point size) may need to decrease, or increase, **to preserve the same legibility of original text...**” (Emphasis added); respectively, Shapiro), and sends said specific file (Col. 20, lines 1 – 6, Ananian).

Regarding Claim 8, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a system, wherein said first database contains files in a first CAD format (Col. 2, lines 43 – 47, Ananian) and said second database contains files in a second CAD format (Col. 8, lines 54 – 57, Ananian¹³).

Regarding Claim 9, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses system, wherein said clearinghouse server is further adapted to:

receive said specific file (Col. 5, lines 52 – 57, Ananian);

convert said specific file from said first transmittable format to said second CAD format (Col. 6, lines 4 – 6, Ananian¹⁴);

translate said specific file from said second CAD format to said first CAD format (Col. 6, lines 10 – 13, Ananian; and Page 4, [0051], lines 14 – 20; Shapiro);

convert said specific file from said first CAD format into a second transmittable format (Col. 6, lines 25 – 28, Ananian); and

Art Unit: 2162

transmit said specific file to said workstation (Col. 13, lines 34 – 36, Ananian).

Regarding Claim 10, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a system, wherein said clearinghouse interface program comprises a plug-in application (Col. 16, lines 26 – 29, Ananian).

Regarding Claim 11, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses a system, wherein said first transmittable format comprises XML (Col. 7, lines 20 – 26, Ananian).

¹³ The CAD files that are manipulated by the system were sent to and obtained from the builders'

Response to Arguments

1. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features of claims 1 and 7 upon which applicant relies (i.e., "the user is sent a requested file converted into transmittable form"; and that the claims as earlier amended require that; "the content of said files remains unaltered") are not recited in such rejected claims. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

2. Applicant cannot show non-obviousness by attacking references individually where, as here, the rejections are based on a combination of references.

In re Keller, 208 USPQ 871 (CCPA 1981).

3. Applicant argues that in the references Ananian and Cianfrocca; "the user cannot manage CAD data in a plurality of disparate and diverse databases or share files across disparate databases without modification of content"; specifically pointing out that Ananian and Cianfrocca fail to disclose; "without modification of content".

database.

¹⁴ Standardized data set (protocol) is a CAD format file (Col. 7, line 12, Ananian).

Examiner respectfully disagrees. As stated in the Office Action dated November 20, 2006, the combination of Cianfrocca in view of Ananian discloses all the limitations as discussed above including translating¹⁵ the content. However, the combination of Cianfrocca in view of Ananian does not expressly disclose: without content change of said requested file. Therefore, the Examiner presented the third reference Shapiro which discloses converting files to formats without content change of said requested file (See 103 rejection of claims 1, and 7, as discussed in this Office Action above, Page 6). Specifically, Shapiro discloses the limitation: “without modification of content” (Fig. 5, and 6, “Source Artwork ENGLISH”, and “Target translated Artwork FRENCH”, Page 4, 5, and 6, [0051], [0067], and [0072], lines 1 – 20, 9 – 13, and 8 – 11, “... the Extractor adds an attribute whose value corresponds to the sequential identification number and which **does not cause a change to the appearance of the object in the Artwork file...**” (Emphasis added); and further “...when translating from one language to another, the size of print (point size) may need to decrease, or increase, **to preserve the same legibility of original text...**” (Emphasis added); respectively, Shapiro).

4. Applicant argues that; “by combining Shapiro with Ananian, then the Examiner has created a combination which cannot work; that is Ananian requires a change to the original plan set, while Examiner argues that Shapiro does not”, and further argues that “the Examiner has failed to make proper prima facie case for obviousness as is required under 35 U.S.C. 103(a) by combining the Ananian Cianfrocca, and Shapiro”.

¹⁵ According to the Academic Press Dictionary of Science and Technology (1992) from Elsevier Science

Examiner respectfully disagrees. As sated in the Office Action dated November 20, 2006, the applied art shows that the combination of Cianfrocca in view of Ananian disclose translating (Col. 12, lines 20 – 27, Cianfrocca; and Col. 6, lines 9 – 12, Ananian), which as defined, does not modify the content (According to the Academic Press Dictionary of Science and Technology (1992) from Elsevier Science & Technology, "translate" means: "1. To convert from one computer language to another. 2. Generally, to convert information from one form to another without altering meaning or function."). Further, the Examiner cited the third reference Shapiro, which explicitly discloses translating without modifying the content (Fig. 5, and 6, "Source Artwork ENGLISH", and "Target translated Artwork FRENCH", Page 4, 5, and 6, [0051], [0067], and [0072], lines 1 – 20, 9 – 13, and 8 – 11, "... the Extractor adds an attribute whose value corresponds to the sequential identification number and which **does not cause a change to the appearance of the object in the Artwork file...**" (Emphasis added); and further "...when translating from one language to another, the size of print (point size) may need to decrease, or increase, **to preserve the same legibility of original text...**" (Emphasis added); respectively, Shapiro). For this reason and for the reasons stated below, the combination of Cianfrocca in view of Ananian and further in view of Shapiro does disclose the claimed invention (Also see claim rejection of claim 1 and 7 above).

Regarding applicant's arguments referring to *prima facie* case of obviousness:

& Technology, "translate" means: "1. To convert from one computer language to another. 2. Generally, to convert information from one form to another without altering meaning or function."

According to MPEP § 2142, to establish *prima facie* case of obviousness three basic criteria must be met. **First**, there must be some suggestion or motivation, either in the references themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine the reference teachings.

With respect to the combination of Cianfrocca in view of Ananian:

The prior art discloses a suggestion for combining the references (Cianfrocca and Ananian).

As suggested by Ananian, skilled artisan would have been motivated to make such combination, to provide/let users manipulate, modify, and update different CAD format files. One of ordinary skills in the art at the time the invention was made would have been motivated to do so, in order to improve interaction between the client and the professionals throughout the construction process; to ensure consistent and informed client input, cost-effective decisions, while maintaining the client's visionary perspective (Col. 2, lines 10 – 17, Ananian). **Second**, there must be a reasonable expectation of success. The prior art suggests a successful outcome of this combination, such as, a significantly reducing in the time, complexity and uncertainty involved in the design of a structure (Col. 3, lines 43 – 45, Ananian), improving interaction between the client and the builder throughout the construction process (Col. 3, lines 53 – 55, Ananian), acquiring a fully detailed build specification from a client (Col. 3, lines 58 – 60, Ananian), and reducing lengthy communications between the builder and the client, making the builder efficient and able to focus on the core task: building the house (Col. 3, lines 61 – 64, Ananian). **Third**, both of the references (Cianfrocca and Ananian) teach features

that are directed to the same industry field of database management systems, such as, relational databases, transmitting and receiving data through servers, clients, and databases. This close relation between both of the references highly suggests an expectation of success.

With respect to the combination of Cianfrocca in view of Ananian and further in view of Shapiro:

The prior art discloses a suggestion for combining the references (Page 4, [0051], lines 1 – 9, Shapiro).

As suggested by Shapiro, skilled artisan would have been motivated to make such combination, to convert geographical maps from one language to another, avoiding major re-editing of the source file, but keeping the appearance and quality of the location based translated text. **Second**, there must be a reasonable expectation of success. The prior art suggests a successful outcome of this combination, such as, keeping the appearance and quality of the location based translated text. **Third**, the applied references (Cianfrocca in view of Ananian and further in view of Shapiro) teach features that are directed to the same industry field of database management systems, such as, converting CAD data files, and translation. This close relation between the applied references highly suggests an expectation of success. Therefore, the combination of Cianfrocca in view of Ananian and further in view of Shapiro discloses all the claim limitations disclosed in the claimed invention.

Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Prior Art made of Record

1. Ananian et al. (US Patent No. 6,922,701 B1) discloses generating CAD independent interactive physical description remodeling, building construction plan database profile.
2. Cianfrocca. Et al. (US Patent No. 6, 088,796) discloses a secure middleware and server control system for querying through a network firewall.
3. Shapiro (US Patent App. Pub. No. 2006/0005126 A1, filed: October 7, 2002) discloses a method for manipulation of objects within electronic graphic documents.

Points Of Contact

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Giovanna Colan whose telephone number is (571) 272-2752. The examiner can normally be reached on 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Breene can be reached on (571) 272-4107. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
